

Arduino Control Program

@author: Daniel Palenicek

@version 1.0 - 22.08.2016

General

The *Arduino control program* for the **Arduino Uno R3** reads control signals from the Arduino's serial port. It then translates them into actions and sends them to the **Arduino Motor Shield R3** that is mounted on top of the Arduino.

The Arduino Motor Shield controls the "[dfrobot 4WD Arduino Mobile Platform](#)".

Deployment

The *Arduino control program* can easily be deployed to the arduino using the open-source [Arduino Software \(IDE\)](#).
